Descrição das tabelas "Vento admissível com a grua fora de serviço"

ATENÇÃO:: As tabelas estão dispostas segundo o número de mecanismos de rotação instalados.

Nas tabelas é indicada, para cada combinação de lança, a posição ideal com o respectivo ângulo de lança e alcance.

Esta posição é determinada para o caso com travão de mecanismo de rotação fixo (direcção do vento 360º) e a respectiva velocidade do vento indicada sob VWAB.

A informação VWABF indica, com a mesma posição, a velocidade do vento, na qual ainda é possível rodar com os mecanismos de rotação.

PERIGO: Se estiverem previstas velocidades de vento maiores, a grua deverá ser recolhida a t

e m p a d a m e n t e e com velocidade de vento menores do que as indicadas na tabe-

la, na coluna VWRST.

Nota: Os dados sobre o vento referem-se a valores medidos na grua;

A altura refere-se à do anemómetro superior.

Explicação relativa à tabela:

DWG Caixa do mecanismo de rotação

HA Comprimento da lança principal

HI Comprimento da lança articulada

WHA Informação de ângulo: Lança principal à horizontal,

ATENÇÃO: O ângulo pode estar fora das tabelas de carga.

WHI Informação de ângulo: Lança articulada (também WV) à horizontal,

com uma ponta fixa: ângulo intermediário

ATENÇÃO: O ângulo pode estar fora das tabelas de carga.

RAD Alcance do bloco de carga ao centro da união rotativa de rolos

HKFL Peso máx. do moitão do gancho

OWB Contrapeso da plataforma rotativa

ZBL Contrapeso central

DB Contrapeso de Derrick

DRAD Raio até ao contrapeso de Derrick

VWAB Velocidade de vento máx. permitida com direcção do vento a 360º e travões do mecanismo de

r otação fixos.

VWABF Velocidade de vento máx. possível para rodar contra vento lateral.

VWRST Velocidade de vento permitida para o processo de recolha
